

Report From Merrie Olde England

MAR-APRIL 1977

No. 43

There is very little Credit Card fraud here, since some years ago numbers corresponding to actual phone numbers were abandoned. It used to be an amalgam of your number. Now the number must fit into a secret matrix the operators have. Thus fraud comes about only by people amalgamating two or more numbers using bits of each to form a "good" one. If you are off by just one digit, they know immediately and tell you so. All UK CC's start 44K which I think is international - the country code, then a "year" letter. US now is 1K, right? (1976). I have tried to figure out this matrix number but to no avail. Here are some examples of cards that are billed to the same phone number. Do not use or reveal them, DELETED but if you have any budding genius who would like to see if he can devise the matrix, then let him. I think it would be far too expensive to equip each operator console with a computer validation all at once, so this is probably the forthcoming US system. Has anyone had any experience of any comeback by security or anyone else as a result of making phony international calls using CC's?

When making international calls here, you call operator (Dial 100) who first checks to see that you are not on a pay phone and possibly verify your number as busy, then she calls the international operator and clicks off. International then takes your number and calls you back after setting up the call. So if you are at a center remote to her, she cannot verify your phone's status. If you had the # to call international direct, you could do it from a pay phone safely and have her think it is a domestic phone. If you had these #s then, they could be rather useful; certainly here, possibly in the US, too. [Typical British understatement]

When using fake CCs, some people in UK go to a pay phone, lift receiver (this gives you dial tone immediately here), dial any digit and leave receiver off its rest. Then they go to another pay phone, preferably some distance away but from which they can see the first one. Make the call, and when the operator asks for your number (which they always do here), give the number of the other box. If they check, they get busy tone - even if they check on their special interior phone circuits, they get the right condition; i.e., someone waiting on the line. If the Feds come, you have a grandstand view from a safe distance.

If the operator is going to call the Feds, she may:

1. Spend an abnormally long time putting you through.
2. Give you a ringing tone, the sort that never gets answered, to keep you there as long as possible.

Try #KPO4412468072ST for a recorded description of clap symptoms. The London (01) 246 xxxx exchange is the equivalent of Big Apple's 999 exchange. Do you have any interesting 999 #s? I only know Dial-a-Joke. If you have 1DDD then (44)12468015 and 8017 are not souped. They are only continental and US tones demo, tho.

When traveling from UK to Germany take plenty of shillings - 5p. pieces (worth 8¢) work as 1 DM (worth 50¢) in German slot machines.

METER JUMPING

In order to avoid any breaking of seals or disturbing of meters, as well as having a system that can be removed immediately when the power man calls, some UK power freaks do the following: Two neon screwdrivers are inserted where wires run in and wiggled about until they light. Copper wire on crocodile clips is run between them. The methods you have shown make getting caught too easy.

I'll be sending you what I have on computer crime.

PDP - 10 operator only commands would be very useful, please. I could send passwords, etc. but unless you had CCITT vol. 24 (or 21, not sure) modems, it would be of little use to you.

THE SILVER BOX

The "Silver Box" referred to by one of your correspondents is a 2280Hz tone interrupted at dial pulse speed (signalling system AC19). I imagine 2600Hz pulsing is used in US in exactly the same way. I sent you articles on how. SF generators are so much easier to build, it's a pity you've not published more about them.

Here the problem is that for SF you need the secret internal P.O. trunk routings, which are completely different for each exchange. So either you need your local operator as a girl friend, or you randomly dial bleeps and ask people their number and build up lists that way.

One question more: In UK about 50% of coin boxes (pay phones) can be used to make ISD - International Subscriber Dialing - to the rest of Europe. The boxes can't handle the high metering rate to US. So if the machine would let you, they would be free. How then does the automatic international equipment validate and discriminate between pay phones and domestic phones (which can call US direct)? I thought the most likely answer is that the off hook resistance of pay phones is different and can be measured automatically. If so, would payphone or domestic phone resistance be higher? I realize I'm talking about foreign equipment but any thoughts you have would be appreciated.

You think Bell smells, well the PO stinks to high heaven! Calls over 30 miles [aren't you metric yet?] midmorning are L2 (about \$3.20) for ten minutes. Also 200 lts/minute [illegible] rental L 100 per annum, weigh 20lbs, and are based on 20 year old technology. All international charges are at least twice to three times as much as other countries. No "foreign" attachments allowed at all (except answering machines). Complete and total monopoly on all forms of communication - even modulated light and carrier pigeons. No CB, and to become a Ham you need to be a fucking electronic genius, and then there are so many restrictions, it isn't worth it. Celebrate your independence!

You're right about this being a Police State. You can't even breathe without permission from our Communist government. Police here can search anyone or any premises on whom or in which they "suspect" drugs, which gives them carte blanche.

The laws on currency exchange control are not even published. You can't even find out what they are; you can only get a "Yes" or "No" answer from the Treasury.

You're right; phones aren't everything. Thanks a million for the Libertarian stuff. It's exactly what I'm into politically. Until now I thought I was unique (I probably am, here). There's only one thing a government should do for its people, only one social service, and that's to keep 'em free.

I'd very much like to get that printed circuit layout. How's it coming? (See #41)

© Youth Hot Line Reports, Inc. 1977 - Do not make checks out to Youth Hot Line Reports, PLEASE! Movement groups may reprint without permission if TAP's address is given with all credits. Please send us a copy of reprinted work. WARNING: We will prosecute copyright violators.

Public Check are very good and deserve a plug from you (pagebreak), in case of language barriers. Oscar Wilde: "the English and the Americans are separated by a common language".

Would anyone want a standard English phone in exchange for ??? I doubt it - they're pretty nasty. I have American, Austrian, German, Swedish, and private system phones in my collection.

Have you ever gone on Holiday and thought of the true cost of it? Not only is there the cost of your holiday accommodation, but the continued cost of your own home. For a Briton like me to come to the US, it is ludicrously expensive. However, what I have in mind is a swap, for, say, three weeks next September. I have a very nice modern apartment, two bedrooms, color TV, etc., 400 yards from the sea on the South coast near Brighton, which has everything and is the place to holiday. I would also like to swap cars, if possible. Mine is a 3.5 Liter auto saloon, the I don't care what kind of car I get in return. Bomb throwing anarchists are requested to leave their bombs behind, as this is rather a conservative area. No more than three people. I would like to return, for my girlfriend and myself, anything similar in the Big Apple or somewhere relatively near in NJ, or even possibly Cleveland, OH or Montreal/Toronto.

We'd have to negotiate about phones. Mine is permanently tapped - yes, I've made a lot of mistakes. You could reduce a Bluebox to SSMF2 and use the call box opposite or credit cards to call the US. (It's a GREAT idea, and if anyone is interested, we'll forward your letters. We assume NO responsibility.)

Enclosed are some photocopied articles from *Undercurrents*. They're a bit intellectual and heavy and have tended to reject Blue Fucks as not being "respectable" and what AT (Alternate Technology) is all about. TAP readers may be interested in subscribing. YES! Undercurrents, 11 Shawwell, May, Dursley, Gloucestershire, England is \$7.50 for 6 bimonthly issues, and don't ask for it for free. Things are rough enough over there. (It is GREAT! The best thing to come out of England since... ah... maybe the best thing ever to come out of England. It's what TAP could be like if we had enough people. Maybe we should just send them our entire files, and return?)

Thanks for the *Equipe* article. The article gives the impression that the typical freak is a blind, spaced-out, Jewish homosexual. Another impression is that there is a hard core of super-techno-freaks who know everything there is to know, and who, quite rightly haven't publicized it - like you wouldn't want everyone to know how to bring Bell to its knees.

There is the same cadre here. Duncan Campbell is the most famous, a veteran from the trial some three years ago which made the PO look like a bunch of dummies, (which they are, of course). He's died in with Undercurrents, for whom many of the other freaks work. They are also interlinked with B.I.T. - whom you know about. (BIT Alternative Information Exchange and Energy Center, 146 Great Western Road, London W11, England.) The rest are a few mavericks working on their own - mostly PO operators with access to the AC9 translation codes, which are kept in a special safe at each exchange, and which, of course, are unique for each exchange.

Kilgore Trout mentions in #37 the boxes the military use, with the five extra buttons used presumably for different levels of priority and for interception and possibly for "seizing" and rerouting of calls in progress. Lemond and Fry say in *No Place in This* "...the bluebox could also have been used to intercept a peace call in progress." They do not explain this. Any ideas?

Here is COITT #5. Note the remarkable similarity to your own, with the addition of 11 and 12, all possible permutations of frequencies are used. Add one extra frequency and you get six more possibilities.

All MF systems - SSMF2 (Western Europe's up and coming system) Touch Tone frequencies, etc. follow the same pattern: when they need five extra numbers, they add one frequency spaced up the "same distance" from the others. SSMF2 we know is used to make satellite circuits possible for data traffic. SSMF2 is "disable echo suppressors". That

makes a neat gap between 1700 and 2100 - to wit: 1700Hz, our major Open Sesame frequency. Your mission, should you decide to accept it, is to test 770 & 1070, 900 & 1300, 1100 & 1500, 1300 & 1800, 1500 & 1900, and perhaps even 1700 & 2100 (since 1700 is used as a control frequency anyway, used with our special control frequencies 1900 might be a super special control #).

Where you insert these numbers, I don't know. Before KP, in conjunction with KP3, using two of these special #s to unlock the system, this is anybody's guess. Best to practice calling a phone # you know to be busy with conversation or music on the line. If you hit it, Whoops!

Sorry to close on a down note: The world is coming to an end, or very near it, beginning 1982, through to 1984 - nuclear war, all of America's seaboard cities and all of Europe destroyed. Both chemical and biological warfare, total economic chaos and starvation. No, I'm not a Jehovah's Witness or a headcase. It's all there, in the heavens. Ask any astrologist, or any futurologist, or Bowie! We got five years*, or anyone. I suggest an Alaskan trip and two years' supply of everything. Depress the Rat

England is a bit further down the road to collapse than the US. I could list dozens of my favorite books about disaster, but will settle for these: Asimov's *Foundation* trilogy, John Christopher's *No Blade of Grass*, Pat Frank's *Alas, Babylon*, E.T. Cernovsky's *The Day After the Day After*. The Earth has become a rotten egg, held together with too many technological Band-Aids, and unless the vast majority of people vocalizes and expresses opposition and repulsion to the future-like desecration of the planet, then they will become the carnal rubble of *Soylent Green*, and the paranoid powerlessness of *1984*. Chris Barry in *The American*

After I saw the classic map of fallout patterns, I figured on retreating to the Siskiyou region (CA-OR border), but the Hanford Nuclear Reservation is in the vicinity. Buried there are more than 75 million gallons of radioactive wastes, which may be dangerous for up to 500,000 years, in lands which may last only 25 years. Some are already leaking.

And then there's *Geophysical Warfare*, described in the December *Saga* magazine. "Science-fiction weapons" like the "Stoneburner" of *Dune* and "green lights" of *Day of the Trillium* actually exist, in the form of laser weapons. And then there are ones we don't even know about! So I may follow Dr. Asimov's advice: Eat, Drink, and Be Merry...

JP

ALIEN PORN

TV porn is happening at a small way in the South of France. One village now has its own TV relay station, set up by a local engineer because of poor reception. However, they didn't realize that they could also use the relay for program distribution. They don't very much about it - the weekly unofficial cost includes the mayor's account of the past week plus local costs. But in fact the local government does too slowly to worry about the illegal transmissions.

UHF receiving aerial (white rectangle) on a hill. TV relay transmitter on a hill. TV set in the village. The relay station is set up by a local engineer because of poor reception. However, they didn't realize that they could also use the relay for program distribution. They don't very much about it - the weekly unofficial cost includes the mayor's account of the past week plus local costs. But in fact the local government does too slowly to worry about the illegal transmissions.

Radio One Hijack

AN AMAZING hijack of BBC Radio took place over the whole of Southern England recently. At 11pm on April 1st, Radio 1's transmitter was hijacked by a station which was supposed to be a test of the new system. The hijack was carried out by a group of people who had been in contact with the BBC for some time. They had been told that the hijack was a test of the new system, and they had been given a list of instructions to follow. The hijack was carried out successfully, and the BBC was forced to shut down its transmitter for several hours.

After the hijack, the BBC was forced to shut down its transmitter for several hours. The hijack was carried out by a group of people who had been in contact with the BBC for some time. They had been told that the hijack was a test of the new system, and they had been given a list of instructions to follow. The hijack was carried out successfully, and the BBC was forced to shut down its transmitter for several hours.

POST SCRIPT

These are some excerpts from *Undercurrents*.

ATTENTION: COMPUTER PEEKS!

The *Personal Computing Directory* will contain names, addresses, telephones, descriptive keywords, and other information about people, clubs, societies, associations, organizations, newspapers, newsletters, book publishers and distributors, magazines, manufacturers, equipment distributors, mail order services, kit vendors, software developers, maintenance and repair services, conventions and meeting organizers, credit and non-credit courses, lectures, clinics, demonstrations, tours, contests, flea markets, in a word - everything you personally computing-related. The directory will have three main parts. The first, a geographical listing, will consist of each name, address, telephone, and description, listed in zip code order, and alphabetically within a zip code. The second part will be an alphabetically sorted list of people and organizations. The third part will be a subject list, sorted alphabetically. The price will be \$4.95, for a 300-page, 4 1/2 x 11 inch paperback, available *now*, April 1, 1977 from: *Personal Computing Directory*, Box 134, Harvard Square, Cambridge MA 02138.

HELP TELCO!

According to Southern New England Telephone's *Telephone Laws*, "If you know of someone who's been abusing phone service, report the person to our security office. Call collect to (508) 771-2134. We'll take it from there."

So...if some one calls your boss, or high school principal, or city hall, or anyone else gives you a hard time on the phone, or if someone gives you a bad time on the phone, and you suspect they may be abusing the Phone Company, be sure to notify Telco. Should be a good idea, huh?

BULLSHIT! PART 2

by TOM EDISON

If you think my editorial in the December issue of TAP entitled "When The Shit Hits The Fan" was too rough on our readers, then you'll really shit in your pants when you read these new policy changes! Ordinarily, the rubber checks that some of you cheap bastards are sending us would be bad enough, but our bank has a handling charge that they pass along to us, so in addition to being ripped off on merchandise and postage (not to mention Elmer's Glue-All!), we're also forced to pay for your rubber check processing! When you start biting the hand that feeds you, it's time to revise our own "systems & practices". Effective immediately: When we get notified that your rubber check has bounced, we will send you a little note "politely" informing you of your "oversight". If at that time you decide that you do not want the ordered merchandise, all we ask is that you reimburse us for the check handling cost charged us by our bank. I think that this is fair and reasonable. If we do not hear from you within a reasonable amount of time, we will assume that you intentionally wanted to rip us off. We will then repay your "kindness" by giving your name and address to Bell Security, the FBI, the CIA, the IRS, the Post Office, the House UnAmerican Activities Committee, and any other appropriate government investigatory agency. This will ultimately result in many "fun filled" years ahead trying to clear your "good" name and reputation. All for a lousy \$4. An eye for an eye!

Please remember that for immediate processing of your order you must send either a money order or a cashier's check. All personal checks MUST clear your bank before we process your order. This could possibly cause your sub to start several months after we get your personal check, so if you do not want this delay, please send either a money order or a cashier's check.

I've received many recent requests for ringback, loop, and verification numbers for various cities. We have some but I'd like a hell of a lot more. You can help by sending me a list of all ringback, loop, and verification numbers for your area. I will compile a listing alphabetically by city and print up a table of numbers when I get a sufficient amount to warrant it. Let's get off your respective asses and send in this requested information. You can never tell when YOU might need some specific info. I hope that I get better reader response on this than I did when I requested readers to send me their off-hook line current. Only 23 readers responded! Priddy Piss Poor!

Dear TAP Folks

Re Xerox access keys: if you use a legit key, but make only one copy at a time and pull the key out after you push the "make copy" button, the counter in the key doesn't increment - altho the machine counter still does. This works on a Xerox 3100; I don't know about others.

He Got Clean Away

Fort Worth, Tex. (AP) — A 25-year-old prisoner has escaped by picking up a broom and sweeping his way out of the city's public-safety building.

Authorities said that the prisoner, Rex Daniel, had been arrested for investigation of auto theft and was about to be photographed and fingerprinted when he escaped.

The police said that a jail attendant had taken the suspect to the identification bureau and left him. The man grabbed the broom, slowly started tidying up the place and dusted off
